PROFESSIONAL SUMMARY

Full Stack Software Engineer with 3+ years of experience designing, developing, testing, and deploying scalable enterprise web applications using React.js, Next.js, Node.js, Express.js, MongoDB, MySQL, and TypeScript. Experienced in building RESTful APIs, authentication (JWT/OAuth), frontend architecture, performance optimization, reusable component libraries, and responsive user interfaces. Strong understanding of Software Development Life Cycle (SDLC), Agile methodologies, system design, code reviews, debugging, CI/CD, and cloud-based application deployment. Passionate about building high-quality software with clean, maintainable code.

EXPERIENCE

- **Zamplia — registered under Suvyavastha Technologies Pvt. Ltd. (Formerly PISC)** July 2023 – Present
Software Engineer *Noida*
 - Designed, developed, and maintained enterprise-scale full-stack web applications using React.js, Next.js, Node.js, Express.js, MongoDB, and MySQL, supporting business-critical survey and market research platforms.
 - Designed, developed, tested, and deployed secure RESTful APIs while implementing JWT and OAuth authentication for enterprise applications.
 - Collaborated with software engineers, QA engineers, product managers, and business stakeholders in Agile sprint cycles to deliver high-quality, customer-centric software solutions.
 - Built reusable React components and shared UI modules that reduced development effort and improved consistency across multiple projects.
 - Optimized application scalability and performance using Redux Toolkit, lazy loading, code splitting, server-side pagination, and rendering optimizations, reducing response times and improving user experience.
 - Wrote unit and component tests using Jest and React Testing Library, improving software reliability and minimizing regression issues.
 - Performed code reviews, debugging, production issue resolution, and application maintenance to ensure software quality and high system availability.
 - Used Git, Docker, Swagger, and CI/CD pipelines to support collaborative development, version control, deployment, and continuous software delivery.

ENTERPRISE PROJECTS

- **SPT (Survey Programming Tool) (Team Size: 5) - Enterprise Survey Management Platform:**
 - Developed and maintained scalable full-stack modules for survey creation, survey programming, reporting, and analytics using React.js, Node.js, Express.js, and MongoDB.
 - Designed and implemented secure RESTful APIs, enabling seamless data exchange and third-party survey import/export across multiple systems.
 - Worked across the complete Software Development Life Cycle (SDLC), including requirements analysis, software design, development, testing, deployment, maintenance, and production support.
 - Developed reusable React components and backend services following software engineering best practices, improving code maintainability and accelerating feature delivery.
 - Optimized application scalability and performance through Redux Toolkit optimization, server-side pagination, lazy loading, code splitting, and rendering improvements, reducing response time by 40%.
 - Collaborated within Agile teams of 5–10+ engineers, QA testers, designers, and product managers to deliver enterprise software releases.
 - **Tech Stack:** React.js, Next.js, Node.js, Express.js, MongoDB, Tailwind CSS, REST APIs, Redux Toolkit, Git.
- **Market Research Platform (Team Size: 10+) - Enterprise platform for survey management, analytics, reporting, and invoice generation.:**
 - Engineered and maintained enterprise-grade full-stack web applications using React.js, Node.js, Express.js, MySQL, and EJS to support survey management, reporting, and invoice generation.
 - Designed, developed, tested, and implemented secure RESTful APIs with Swagger documentation, enabling seamless third-party integrations and efficient data exchange.
 - Developed analytics dashboards and reporting modules, delivering real-time business insights through optimized data visualization and reporting features.
 - Optimized SQL queries, backend APIs, and frontend rendering, improving application performance and reducing response times by 30%.

- Collaborated with cross-functional teams in Agile sprint cycles, participating in requirements analysis, software design, code reviews, testing, deployment, debugging, and production support.
- Contributed to software enhancement and maintenance by resolving production issues, implementing performance improvements, and following software engineering best practices.
- **Tech Stack:** React.js, Redux Toolkit, Node.js, Express.js, MySQL, EJS (SSR), JWT, OAuth, Swagger, Git.

SKILLS SUMMARY

- **Programming Languages:** JavaScript, TypeScript, SQL, C++, Python (Basic)
- **Frontend:** React.js, Next.js, Redux Toolkit, HTML5, CSS3, Responsive Design, SSR, SSG, React Testing Library, Jest
- **Backend:** Node.js, Express.js, RESTful APIs, JWT Authentication, OAuth 2.0
- **Databases:** MongoDB, MySQL
- **Software Engineering:** Software Design, Software Development Life Cycle (SDLC), Object-Oriented Programming (OOP), Design Patterns, Frontend Architecture, Scalability, Performance Optimization
- **Testing:** Unit Testing, Component Testing, Jest, React Testing Library, Debugging, Defect Resolution
- **Tools:** Git, Docker, CI/CD, Swagger, Postman, VS Code
- **Methodologies:** Agile, Scrum, DevOps, Code Review, Version Control, Production Support
- **Core Skills:** Data Structures & Algorithms, Problem Solving, Analytical Thinking, System Design

CO CURRICULAR ACTIVITIES

- Solved more than 400 Coding problems using C++ on - LeetCode, GFG, CodeStudio, CodeChef.
- Achieved 1409 rank in CodeChef Starter 53 out of 14,854.
- Attending Workshop on the topic of "Build Airbnb Clone" Using Reactjs By Acciojobs.
